

**Printec S.A. and Spectrum Message Services Deliver
MoneyGUARD Interactive SMS Messages Application**

Solution provides confidence and control to customers using cards

(Athens, Greece – 27 July 2009) – Printec S.A., subsidiary of Printec Group, the leading provider of Transaction Automation solutions in South Eastern Europe, today announced its partnership with Spectrum Message Services Pty Ltd to market its MoneyGUARD interactive SMS messaging platform. The system provides near real time alerting for debit and credit card transactions as well as a range of interactive message services. The product provides an additional layer of protection to banks' fraud systems, using the flexibility and convenience of interactive SMS messages to identify and stop fraud quickly.

Customers subscribing to the alerts from MoneyGUARD, provided by their bank, will be able to identify suspicious transactions as they occur, in real time, by receiving an SMS message within seconds after conducting a transaction, containing details of the transaction such as location, merchant name and amount. If that transaction is fraudulent, the customer can respond with a simple 'BLOCK' message, and the card can be stopped. This has the potential to stop fraud much sooner than current methods, and to prevent cards being blocked incorrectly by banks in attempts to stop fraud, and therefore helping to improve customer service.

In addition to the system responding to transactions the bank believes are fraudulent, customers can ask to be notified of transactions that meet pre-defined parameters – such as overseas, over a certain value, online etc. They can also use the tool to request balance enquiries, change credit limits or perform exchange rate checks – giving the customer a simple, interactive channel to contact the bank at any time, from any place, and providing the bank with an important opportunity to generate additional revenue.

Gerard Vos, managing director of Spectrum Message Services, said “This partnership is part of Spectrum’s strategy to expand sales of its solutions through well respected partners. Printec’s long standing history, expertise and local presence will serve to further promote Spectrum’s widely accepted solutions in Greece.”

Yannis Karagiannis, General Manager Printec Greece said “We are happy to announce our business partnership with Spectrum. As losses from card fraud continue to rise, Printec responds to the growing request of its customers for enhanced security in card transactions with this partnership. Printec will now be able to provide Greek Financial Institutions and their end customers with the ability to respond even faster to fraudulent use of payment cards while at the same time guaranteeing optimum card services.”
